

Inspection of variable print with VisioRead.

Inspection of batch number, production date and expiry date on the label.

The yellow frame shows the allowed printing area.

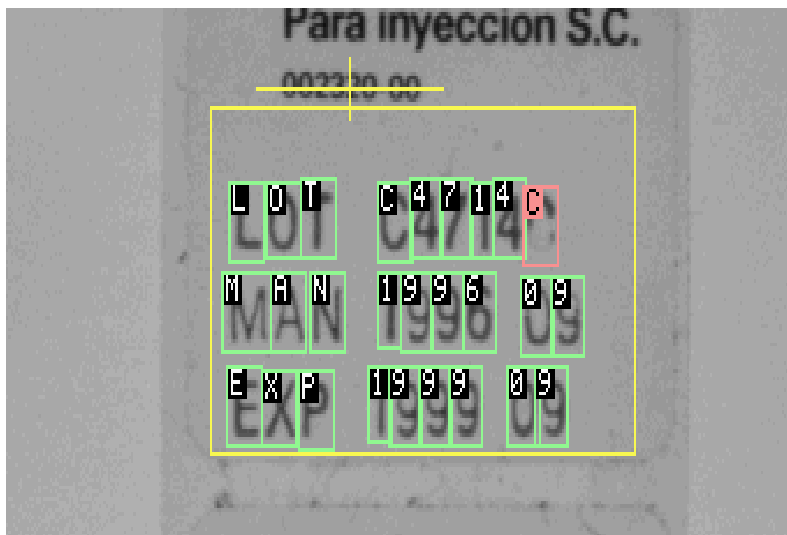

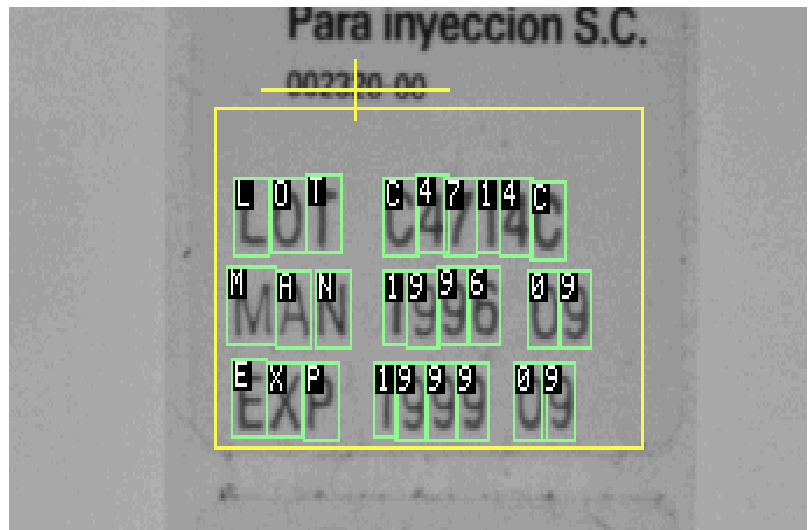

The condition is that the lines read:

```

LOT C4714C
MAN 1996 09
EXP 1999 09
    
```

Green = OK

Red =Error

Inspection of print quality.

The VisioRead system searches the picture and tries to verify:

- all characters and numbers
- in correct order
- in correct quality
- within the permitted printing area.

Rejects misprints with:

- Print in wrong place (outside the printing area).
- Totally or partly missing text.
- Characters and numbers with insufficient print.

Inspection by character reading - no misunderstandings.

VisioRead **reads** the characters to avoid texts that are:

- Incorrect or misleading.

Even with big tolerances it is guaranteed that:

- No characters can be misunderstood.
(A faulty 4 is perceived as a 1)

It is impossible to make an adjustment error on the print machine, when VisioRead is set to correct text.
